

GD high pressure road surface cleaning machine

Description:

This machine does cleaning work depending on that the engine driving the steel wire going around and grinding. It is mainly applied to cleaning the bleeding cement, slurry, mud, floating earth and the cold varnish index line on the road surface. In the shelf of the vehicle, the adjustor for the cleaning power can be adjusted without grade. This machine can enhance the attachment between the index line and the ground, thus improving the efficiency of the cleaning work before the construction. This kind of cleaning machine is the dedicated product for the difficult road conditions.

Features:

1. save time
2. and energy
3. enhance the work efficiency

Application:

It is mainly applied to cleaning the bleeding cement, slurry, mud, floating earth and

the cold varnish index line on the road surface.

Technical data:

Type	GD high voltage road surface cleaning machine
Power	Honda5.5HP gasoline engine
Adjustment scope for the cleaning strength	strong, middle and weak without grade
Steel wire wheel	wear resistant steel wire brush
Rubber wheel	Iron-made wheel section, made of special grinding proof rubber.
Dimension	1150*620*760mm
Net weight	40kg
